

CXCL8, CXCL9, CXCL10, CCL2 and CCL5 plasma levels detected in patients with active pulmonary tuberculosis (ATB) by cytometric bead array. The same group of patients was studied after completion of the six-month chemotherapy (TTB). n = 11 for CXCL9, CXCL10 and CCL2; n = 8 for CXCL8 and CCL5. Asterisks means  $p < 0.05$  between the ATB and TTB medians (Wilcoxon matched pairs test).
