

NLRP1 rs12150220-rs2670660 haplotype frequencies and association results

Haplotype	HTLV, HC frequencies	p
A-A	0.588, 0.538	0.287
T-G	0.261, 0.325	0.147
A-G	0.138, 0.130	0.810

frequencies and p-values were reported for resulting haplotypes in human T-lymphotropic virus 1 (HTLV-1) and health controls (HC) groups (according to Haploview software, haplotype frequencies were estimated by the expectation-maximization algorithm and haplotype association was evaluated by chi-square test).
